# Exercise: Product Display Card Component

## Scenario:

You are building an e-commerce website that needs to display product information consistently across multiple pages. Create a reusable custom tag component that displays product cards.

## Requirements:

1. **Create a tag file** `productCard.tag` that accepts the following attributes:
   - `productId` (required) - Product identifier
   - `name` (required) - Product name
   - `price` (required) - Product price
   - `imageUrl` (optional) - URL to product image (default: "no-image.jpg")
   - `description` (optional) - Short product description
   - `discount` (optional) - Discount percentage (0-100)
   - `showAddToCart` (optional) - Whether to show "Add to Cart" button (default: true)
2. **The component should:**
   - Display product information in a styled card format
   - Show original and discounted price if discount is provided
   - Apply strike-through formatting to original price when discounted
   - Show a "Sale!" badge if discount is 20% or more
   - Conditionally display the "Add to Cart" button based on the attribute
   - Use HTML5 semantic elements where appropriate
3. **Create a JSP page** `products.jsp` that:
   - Uses the taglib directive to import your custom tag
   - Displays at least 3 different product cards using your custom component
   - Demonstrates usage of both required and optional attributes
   - Shows at least one product with a discount and one without

## Starter Structure:

```
/webapp
  /WEB-INF
    /tags
      productCard.tag    <-- Your tag file here
```

```
products.jsp        <-- Your JSP page here
/images             <-- Optional: for product images
```

## Expected Output:

Your product cards should look like:

text

```
┌──────────────────────────┐
│ [SALE!]                  │
│  ┌──────────────┐        │
│  │  IMAGE       │        │
│  └──────────────┘        │
│ Product Name             │
│ ★★★★★ (5.0)              │
│ ~~$99.99~~ $79.99        │
│ [Add to Cart]            │
│ Short description        │
└──────────────────────────┘
```
